

FOR IMMEDIATE RELEASE  
MAY 2009

**Newman & Company Inc. has expanded production capabilities to  
include Tan Bending Chip**

Since 1919 we have been manufacturing Plain Chip, Calender Stains, Solid Black, White 1/S & White 2/S along with a full complement of converted products. While our primary focus for the packaging industry has been rigid boxboard, additionally, we now are able to supply light weight folding carton stock. This has substantially increased our production and positioned us to sustain the long term plan for our company. “Market conditions as well as consolidations of other paperboard manufacturers have allowed us to grow our business, making this the right time to expand our traditional product offerings,” said Charlie Wismer, Vice President of Sales.

In addition to producing Tan Bending Chip to our customer’s specifications in calipers from .018-.024, our Small Quantity Division inventories multiple stock sizes which are always ready for immediate delivery. We also inventory all of the other grades we manufacture as well as SBS and Clay coated board.

Please call for samples.
